To Whom It May Concern,

I am writing to express my sincere interest in your New Graduate RN Program. As a recent graduate of Mount Saint Mary's University's accelerated Bachelor of Science in Nursing program, with a prior Bachelor of Science in Psychology from California State University Channel Islands, I bring both a scientific grounding in human behavior and a deep clinical foundation to patient-centered care. I am eager to begin my hospital nursing career at an institution committed to the care and improvement of human life, one that recognizes the unique worth of each individual and treats every patient served with compassion and dignity. I believe healthcare is a powerful equalizing force, one where every patient, regardless of background, deserves to be treated with respect, and this belief has guided every step of my academic and professional journey.

With 900+ clinical hours across diverse healthcare settings, my rotations have given me a rigorous and well-rounded foundation. I developed confidence managing complex patients across numerous units and specialties, and I learned to adapt rapidly to high-acuity medical and behavioral emergencies, drawing on both my nursing training and my psychology background. Across every rotation, I was continually drawn to the acute care environment. The complexity of the patients, the pace of decision-making, and the depth of collaboration required between disciplines. These experiences have shown me that exceptional nursing means caring for the whole person, not just their diagnosis.

I am now putting that foundation into practice as a licensed Pre-Op & PACU Registered Nurse. In this role, I perform thorough pre-operative assessments in collaboration with the surgical team, insert IVs, assist with the management of local and general anesthesia, and care for patients as they recover. I also conduct PRP blood draws and educate patients and their families on discharge instructions and post-procedure care. Working in a fast-paced surgical environment has sharpened my head-to-toe assessments, my ability to recognize subtle changes in a patient's condition, and my confidence in medication safety, and it has strengthened my desire to build on this experience in a hospital setting.

I am especially drawn to organizations that invest in their nurses as much as their patients, built on the belief that every team member is a valuable part of the care equation. I believe the best patient care is built on strong, trust-based teams, and I am eager to contribute to and learn from one as I grow into a confident, well-rounded clinician.

Beyond my nursing practice and clinical training, I bring five years of relevant professional experience that has uniquely prepared me for the complexity of nursing care. My prior roles as a TMS/Spravato Senior Technician at SoCalTMS Center and as a Behavioral Technician have sharpened my clinical judgment, deepened my empathy for vulnerable populations, and given me hands-on experience advocating for patient access in real-world healthcare systems. These roles have reinforced my conviction that honest, compassionate, and individualized care is not a luxury, it is the standard every patient deserves.

I am committed to growing within an organization that shares my belief in the intrinsic worth of every patient and the power of a dedicated care team. I would welcome the opportunity to contribute to your team and to continue developing as a clinician in an environment that shares my values. Thank you sincerely for your time and consideration.

Respectfully,

Ella Demian
